Povzetek

Z novimi generacijami prihajajo v šole učenci in dijaki, ki so odraščali z daljinskim upravljalnikom, miško in mobilnim telefonom. Navajeni so spremljati več stvari hkrati, šola pa jim običajno zaposli le en čut – večinoma sluh. Z uporabo i-tabel želimo v šoli povečati aktivnost udeležencev v izobraževalnem procesu, izboljšati njihovo motivacijo in razvijati predstavnost tudi pri predmetih, ki so tradicionalno bolj arhivski oziroma terenski.

Abstract

New generations are entering school doors that grew up with remote-control, cell phone and mouse. They are used to monitor more than one thing in a moment. However, schools are keeping them busy by the single way –

mostly listening. With Interactive Whiteboards we attempt to increase the activity and motivation of our students, and to improve their imagination also in the traditionally more archival or field subjects.
