Povzetek

Projekt E-šolstvo združuje projekt E-kompetentni učitelj, v katerem postavljamo standard e-kompetentnega učitelja, ravnatelja in računalnikarja in v teh okvirih pripravljamo in izvajamo usposabljanja ter druge dejavnosti, in projekt E-podpora, v katerem izvajamo svetovanja šolam na različnih ravneh. Sodelavci v projektu so učitelji, ravnatelji, strokovnjaki s fakultet in drugih inštitucij, vzpostavljamo pa tudi tesnejše sodelovanje s fakultetami in drugimi inštitucijami na področju izobraževanja doma in v tujini.

V enem letu izvajanja projekta, tj. od marca 2009, smo na področju usposabljanja izvedli 879 seminarjev z 7887 udeleženci, dve redni usposabljanji sodelavcev projekta, ki jih je sedaj že skoraj 500, koordinirali izvajalce e-gradiv, izvedli smo natečaj za manjša e-gradiva, pripravili metodologijo spremljave in evalvacije projektnih dejavnosti, organizirali konferenco SirIKT. Pripravili smo tudi dokument Zapis standarda e-kompetentni učitelj, ravnatelj in računalnikar, ki je temelj v našem postavljanju koncepta usposabljanj, tj. seminarjev in svetovanj, ter predlogu za uvedbo licence tega standarda. V njem smo postavili standard 6 temeljnih zmožnosti oz. e-kompetenc za učitelje, ravnatelje in računalnikarje, strukturo pridobivanja licence, pot za doseg standarda ter seveda normativ, ki predpisuje pogoje in možnost obnavljanja licence.

Projekt E-šolstvo je velika priložnost za vse posameznike na področju izobraževanja v razvojno-raziskovalnem delu in pri izgradnji sistemskih rešitev, ki jih potrebujemo v šolstvu, in sicer pri postavitvi temeljev za uspešno poučevanje in učenje v šoli 21. stoletja.

Abstract

The E-education project embraces two projects, i.e. the E-competent teacher project, in which standards for e-competent teacher, headmaster and IT expert has been developed and all the necessary teacher training programmes to support it; and the E-service and Support project in which support and consulting is offered to schools. Collaborators in the project are teachers, headmasters, experts from faculties and other institutions; moreover, we are also inviting faculties and other institutions to collaborate in project activities.

In the period from March 2009 till March 2010 we organised 789 seminars for 7887 participants, two teacher training workshop for 500 project collaborators, we coordinated activities for e-materials development, designed methodology for project monitoring and evaluation and organised the SirIKT conference. We also designed the document The e-competent teacher, headmaster and IT expert standard which represents the key foundation for designing the teacher training scheme, i.e. seminars and workshops, and the proposition for the licence which all target groups will be able to obtain after finishing required programmes. We determined 6 key e-competencies for teachers, headmasters and IT experts, the scheme for obtaining the licence, and the accreditation scheme which includes also the requirements for retaining the licence.

The E-education project is a great opportunity for all individuals in the field of education to participate in the research and development of national scheme for effective teaching and learning in the 21st century school.
