

# UPRAVLJANJE Z IDENTITETAMI NA NORVEŠKEM IDENTITY MANAGEMENT IN NORWAY

LARS KVITENG,  
UNINETT

## POVZETEK

Feide je norveška infrastruktura za overjanje istovetnosti in avtorizacijo na področju izobraževanja. Uporabnikom omogoča dostop do aplikacij z enotnim uporabniškim imenom in geslom. Federacija Feide deluje že deseto leto, njeni člani pa so vse univerze ter skoraj vse visoke šole na Norveškem. Feide sodeluje tudi z osnovnimi in srednjimi šolami. Predstavitev se osredotoča na postopke, ki so se v Feide izkazali za uspešne, in prednosti, ki jih ponujajo – za domače organizacije, ponudnike storitev in končne uporabnike. Pojasnili bomo tudi, kako se tega trenutno lotevamo in predstavili naše načrte v prihodnosti.

KLJUČNE BESEDE: FEIDE, IDM

## ABSTRACT

Feide is the Norwegian authentication and authorisation infrastructure for the education sector. Feide gives end users access to webservices with single username and password. The Feide Federation has been in operation for ten years, and today all universities and most university colleges in Norway are members of the Federation. Feide also covers primary and lower secondary schools. My presentation will focus on what the successful policies have been for Feide, and what the benefits have been – for home organisations, service providers and end users. I will also focus on how we are currently going about this, and then mention a few words about the road ahead.

KEY WORDS: FEIDE, IDM
